

## LAB ACTIVITY 6

(Due November 4th @23:59)

***Please submit the Jupiter notebook file or .py file with your answers. Please don't remove the error messages from the notebook.***

1. Write a program that asks the user to enter the store's sales for each day of the week. The amounts should be stored in a **list called sales**. Use a loop to calculate the total sales for the week and display the result. (5 points)
  
2. Write a program that asks the user to enter a series of 20 numbers. The program should store the numbers in a list and then display the following data: (8 points)
  - The lowest number in the list
  - The highest number in the list
  - The total/sum of the numbers in the list
  - The average of the numbers in the list.
  
3. Write a program to generate a seven-digit lottery number. The program should generate seven random numbers, each in the range of 0 through 9, and assign each number to a list element. Then write a loop that displays the contents of the list. (5 points)
